Abstract

The European Social Survey (ESS) is an academically-driven multi-country survey, which has been administered in over 35 countries to date. Its three aims are, firstly – to monitor and interpret changing public attitudes and values within Europe

and to investigate how they interact with Europe's changing institutions, secondly – to advance and consolidate improved methods of cross-national survey measurement in Europe and beyond, and thirdly – to develop a series of European social indicators, including attitudinal indicators.

In the ninth round, the survey covers 30 countries and employs the most rigorous methodologies. From Round 7 it is funded by the Members, Observers and Guests of ESS European Research Infrastructure Consortium (ESS ERIC) who represent national governments. Participating countries directly fund the central coordination costs of the ESS ERIC, as well the costs of fieldwork and national coordination in their own country.

The survey involves strict random probability sampling, a minimum target response rate of 70% and rigorous translation protocols. The hour-long face-to-face interview includes questions on a variety of core topics repeated from previous rounds of the survey and also two modules developed for Round 9 covering Justice and Fairness in Europe, and the Timing of Life (the latter is a partial repeat of a module from Round 3).

Sampling

Sampling Procedure
Please see: http://www.europeansocialsurvey.org/essdoc/doc.html?year=2018&ddi=2.3.1.4

Response Rate
Please see: http://www.europeansocialsurvey.org/essdoc/doc.html?year=2018&ddi=2.3.3.1

Weighting
DESIGN WEIGHTS:
The purpose of the design weights (DWEIGHT) is to correct for unequal probabilities for selection due to the sampling design used.
In general design weights were computed for each country as follows.

1.w = 1/(PROB1*...*PROBk) is a nx1 vector of weights ; k depends on the number of stages of the sampling design.

2. All weights were rescaled in a way that the sum of the final weights equals n, i.e. Rescaled weights = n*w/sum(w).

POST-STRATIFICATION WEIGHTS: The purpose of the post-stratified design weights (PSPWGHT) is to reduce sampling error and non-response bias, using auxiliary information. The post-stratification targets use information about age, gender, education and region. Raking (iterative proportional fitting) has been used in the production of the post-stratified weights, using the ipfweight procedure in Stata v15. For most countries population targets are weighted estimates from the European Union Labour Force Survey 2018 (Eurostat). Exceptions are Republic of Serbia, and Montenegro, for which targets were obtained from the respective national statistical office websites.

ANALYSIS WEIGHTS: The analysis weight (ANWEIGHT) corrects for population size when combining two or more countries' data, and is calculated as ANWEIGHT=PSPWGHT*PWEIGHT. When analysing data from a single country, or comparing countries, use of ANWEIGHT or PSPWGHT should give identical results.

POPULATION SIZE WEIGHTS:
The Population size weight (PWEIGHT) corrects for population size when combining two or more country's data, and is calculated as PWEIGHT=[Population aged 15 years and over]/[(Net sample in data file)*10 000]
Source population figures: Eurostat.

Processing Checks
The data file is checked for: duplication of ID numbers, variable names and formats, empty records, wild codes and logical inconsistencies. Missing values have been assigned.

Missing Data

The following missing values have been assigned:
6, 66 etc. = Not applicable
7, 77 etc. = Refusal
8, 88 etc. = Don't know
9, 99 etc. = No answer, i.e. Missing data not elsewhere explained
. = Variable not relevant, not deposited, or for other reason omitted from the data file by the archive.

Notes	INTRODUCTION TO QUESTIONS G8-17: Now some questions on your personal situation. Please remember that all the information you give me will be treated in the strictest confidence. [The following block of questions (G8 to G17) is routed based on the respondent's main source of personal income, as previously reported in F42a (or F40 for one-person households). Questions with the 'a' suffix are asked to respondents receiving wages or salaries, income from self-employment or from farming; questions with the 'b' suffix are asked to respondents receiving pensions; questions with the 'c' suffix are asked to respondents receiving unemployment/redundancy benefit or other social benefits or grants.] [Countries can include any subset of the 3 categories below] NOTE ON ADMINISTRATION OF G8a The set of country-specific categories that are listed in the 'Consultation outcomes' for Justice and Fairness on the ESS9 NC Intranet should be made available to interviewers. In countries where two or more categories are relevant, G8a should be asked to all respondents. In countries where only one category is relevant, G8a should be skipped and the pre-selected frequency of pay should be included at G9a, G11a, G15a and G16a. Iceland: Filter error.
